

I-Cycle Recycle Bins

Centralized containers can be located in well-traveled hallways, the mailroom or copier room, and any other areas where large quantities of paper are generated. These centralized containers can be large enough to serve as final storage containers and moved to the loading dock for pickup. They may be emptied into larger storage containers.

- Who will be responsible for emptying desk side recycling containers? **(employees)**
- Who will be responsible for emptying the common area recycle containers? **(janitors)**
- Will the janitors empty the containers every night? **(yes)**
- Will employees empty them in a central location once they are full? **(yes)**
- Who will transfer the contents to outdoor collection containers? **(janitors)**
- Who will train staff and janitorial personnel? **(facilities administrator)**

Make sure your system is convenient and flexible and **keep the janitors and facilities staff involved throughout the process.**
